

Context of the organization

Guided by the vision to be the leader in the production and supply of sugar in the region and among the leading sugar producers in Europe, we are continuously growing in all business segments. We recognize the greatest achievements of our work in fostering the corporate mission, producing sugar of the highest quality, respecting all the requirements of food safety standards, under the most optimal production conditions, while taking care of consumer needs, safety, health of employees and the environment.

With two sugar factories in Vrbas and Pećinci, we are the largest domestic producer and exporter of sugar.

We supply sugar to a large part of the domestic and foreign food and confectionery industry, a large number of wholesalers and households.

As a responsible entity on the domestic market by producing a health-safe product, sugar, we constantly strive to ensure a stable and sustainable supply of related industries and the widest range of consumers with the sweetest staple food, sugar.

Sunoko is an environmentally responsible company that performs all business activities in accordance with the mission of preserving a healthy living environment, taking into account safety and health at work

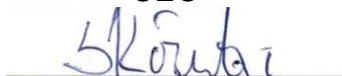

We believe that a healthy environment and safe working conditions are an incentive that constantly leads us to the mission of contributing to raising the level of awareness of all employees about the preservation of natural resources, as well as influencing the awareness of the wider environment. We achieve this by informing the public about important environmental activities, safe work, but also investments in the most advanced technology.

In the production centers Pećinci and Vrbas, in order to protect the environment, improve safety and health at work and preserve the quality of products, continuous investments are made.

The company Sunoko, from the moment of its establishment, decided to produce health-safe products, preserve the environment, safety and health at work, and will continue to follow that path. We hope that others will also understand the importance of this direction and that in the near future we will not be alone in this mission, but that we will have new, good and valuable "green" companions.
